

LightSpeed: The European Tour

LightSpeed will be in Europe from February 4 – 20, 2019. Sean Scale, Director of Implementation, and Brian Bembridge, Implementation Specialist, are visiting four Selecta branches – Frankfurt (Germany), Kirchberg (Switzerland), Paris (France), and Zurich (Switzerland) – to install Lightspeed technology. Each location will be outfitted with either the Mobile or the FastTrack pick-to-light system, which is an expansion for Kirchberg and a brand new installation for the remainder of the sites.

Selecta became a customer in 2018 and selected the Kirchberg branch as the flagship location to use LightSpeed technology. The Mobile picking system was installed in Kirchberg in August 2018. Using this technology, Selecta optimized its productivity and efficiency resulting in faster picking with less errors. Within the first three months of implementation, Selecta approached LightSpeed about expanding the original system in Kirchberg and bringing on additional branches.

LightSpeed is excited to expand our partnership with Selecta and to establish a presence in the European market. We hope this is the first step to providing a global solution for warehouse efficiency for the pick, pack and ship industry.
